

● New product package

RaySafe X2 Solo Dent Plus

Complete solution for dental QA testing

The RaySafe X2 Solo Dent paired with RaySafe X2 Survey gives you everything you need to help ensure your dental X-ray machines are safe, compliant, and performing optimally.

- **Stay compliant** – Annual testing is required by law in most countries. Even where it's not, it's the best way to maintain top image quality.
- **Detect hidden risks** – Use survey sensor to check for radiation leakage from walls or the X-ray machine tube during setup, installation, and beyond.
- **Complete measurements** – Dent sensor measures dose, dose rate, kVp, exposure time, pulses, pulse rate and dose/pulse - optionally HVL, Total Filtration, and invasive mAs – on all types of dental X-ray machines
- **Improve efficiency** – Instant data reduces image quality issues, guesswork, and extra costs.

Introductory offer*

New customers	Buy the RaySafe X2 Solo Dent Plus (includes survey sensor) and get the HVL option free.
Existing customers	Upgrade to RaySafe X2 Solo Dent Plus free when purchasing a survey sensor, including a Base Unit upgrade.
